Health and Life Sciences Centre Functional and Development Study (COLL-010)

Title: The Health and Life Sciences Centre Functional and Development Study *fonds*
Dates: April 1969
Extent: 2 volumes [vol.1: 187 pages, vol.2: 160 pages]

Administrative History:

The Medical School and University Hospital project was first considered in the period 1961-1963, and its need and feasibility was supported by Lord Brain in his study and subsequent report on the Health Services in the Province in 1965-1966. It also demonstrated and reaffirmed the MacFarlane report of 1966. Following a conference held in St. John's in the fall of 1966 to discuss the effects of the establishment of a health sciences centre, a Brief to the Government of the Province of Newfoundland and Labrador was prepared and submitted by the University in November 1966. A commitment in principle was made by Premier Smallwood on behalf of the Provincial Government on 18 April, 1967, recognizing the immense benefits, which would accrue to the Province's health resources as a result of the institution of a medical school and university hospital.

The publication of the Royal Commission on Health Services in Canada and the subsequent establishment of the Health Resources Fund by the Federal Government confirmed the local and national need to train more medical and para-medical practitioners and assisted in no small measure in establishing the viability of the project terms and initial cost. The University, in recognising the close disciplinary relationships between the Health and Life Sciences and the academic and economic benefits, which would be achieved, decided in 1967 to integrate the Life and Health Sciences into one physical and administrative complex. The facilities in this complex would include schools of the health-related professions in a similar close association to the continuing benefit of Newfoundland and Labrador.

In the summer of 1968, following the appointment of the Dean of Medicine, work began on functional planning and development of a master plan for the Health and Life Sciences Centre within the framework of Sir Frederick Gibberd's master plan for the University as a whole. This planning and development document found here in this collection, is divided into two parts and defines the functional objectives of the proposed Centre, outlines its functional requirements and organization in terms of personnel and space and recommends a plan or framework for its physical development.

The Functional and Development Plan for the Health and Life Sciences Centre at Memorial University represented a further, positive step towards the realization of Newfoundland's Medical School and University Hospital. Also, it defined the future expansion of the important programmes of the Life Sciences and the establishment of training facilities for the health-related professions.

Custodial history:

The Health and Life Sciences Functional and Development Plan was published in report form and disseminated among shareholders and Health Care executives. This copy was given to Dr. A.R. Cox, Dean of Medicine at Memorial, and then passed onto Dr. Ian Rusted.

Scope and content:

The functional and development plan was developed to meet the specific needs of Newfoundland and Labrador's medical system not only in relation to the health services of the Province but also to ensure that fiscal demands arising from the construction of the Centre could be met by the Government in a flexible way. The development concept recommended in this report was not a rigid plan but a system of building the facilities for this very exciting and forward-looking Centre.

The wide range of alternative phasing possibilities meant that the plan would need to be monitored, ensuring that the University's needs were met, phase by phase, and the Centre's full potential was realized without inhibiting the basic aim of integration of the disciplines. It was also intended the plan be extremely functional to produce an efficient and economic Centre, both in construction and in operation, and that the design concept proposed would enable the Provincial and Federal Government to embark upon the construction of this Centre with confidence.

The study was performed by Llewellyn-Davies Weeks Forestier-Walker & Bor of London, England and Ottawa, Ontario. The *fonds* consists of the following series:

1.0 Publications, April 1969

Source of title:

Title based on contents of the *fonds*

Acquisition:

The report was acquired in February 2000 from Dr. Ian Rusted who donated the report to the Faculty of Medicine Founders' Archive as part of the publications found in his collection.

Arrangement:

When the Functional and Development Plan for the Health and Life Sciences Centre at Memorial University arrived at the Founders' Archive, it was stored with various other publications by Faculty Members. It was removed and stored separately, forming the framework for further arrangement and description of the collection.

Restrictions:

There are no restrictions on access to or use of the materials in this *fonds*. However, all materials in this *fonds* are protected by copyright. It is the responsibility of the researcher to obtain copyright clearance from the copyright holder(s).

Accruals:

No further accruals are expected.

Series and Sub-Series Description

1.0 Publications, April 1969

Scope and Content:

The study was performed by Llewellyn-Davies Weeks Forestier Walker & Bor of London, England and Ottawa Ontario, and was divided into two parts.

1.01 Functional and Development Study, Part I

1.02 Functional and Development Study, Part II

- 1.01.001 *Academic and Research*
 - Life Sciences
 - Medical School: Basic Health Sciences
 - Clinical Sciences
 - Para-medical Schools

- 1.01.002 *University Hospital*
 - Inpatient Accommodation
 - Ambulant Patient Accommodation
 - Diagnostic Departments
 - Treatment Departments
 - Medical Service Departments
 - Non-Medical Service Departments
 - Administration and General

- 1.01.003 *Support Facilities*
 - Shared Facilities
 - Learning Resources Centre
